

# Field Commissioning & Maintenance Contract Services

Price On-Site acts as an “advocate” for the wind farm owner by ensuring efficient turbine start-up through rigorous inspection processes designed to identify and remedy unseen damage caused by environmental conditions, or shipment of key sub system components. Pro-active maintenance contracts then ensure longer term turbine live and up-time.

Wind energy is growing at a significant pace today in North America based on increased demand for power. This demand is underpinned by years of neglect in expansion of North America’s overall power generation infrastructure. Bolstered by a renewed focus on renewable energy, the industry is poised to become a very important part of the overall capacity picture in years to come.

## Our process...

### I. Assessment

Our technicians utilize a detailed inspection process to examine all major subsystems. The results are delivered in a detailed, check list style report that highlights all major system anomalies, or performance gaps. The reports focus on immediate corrective actions that the wind operator can take to ensure efficient start-up.

### II. Remediation

In cases where the operator cannot effect the necessary repair, Price On-Site provides alternatives for immediate repair, or modification of the sub systems to ensure a safe and reliable start-up. Price On-Site strives to deliver solutions that can be implemented on site to minimize costs. Whether it is adjustment of the pitch control system, or oil changes due to contamination caused by extended storage, Price On-Site is there to eliminate the problem.

### III. Prevention

Once a farm is brought back to peak operating performance, Price-On Site delivers a turnkey solution for maintaining the health of turbines leveraging a combination of “Price owned” remote monitoring equipment for early detection of issues, augmented by scheduled site visits for continuous assessment. We are so confident in our processes, that customers contracting with Price On-Site are covered by an additional comprehensive two year warranty on all contracted systems.

# Field Commissioning Services

Price On-Site is a subsidiary of Price Engineering, a company founded in 1953. We have over five years experience working with major OEM's and delivering service to hundreds of turbines across the country. Based in Hartland, WI we bring countless hours of field experience and engineering to bear in delivering solutions to our customers.

At Price On-Site our tower safety trained field service technicians are available 24 hours a day, 365 days a year. They are seasoned veterans with experience across multiple disciplines ranging from automation and control systems to fluid quality analysis. Our team is backed by an extensive network of partners that enable us to meet the rigorous project schedule of today.

## Price On-Site benefits...

- As experts in hydraulic control and lubrication systems we bring to bear multiple skill sets that allow us to troubleshoot and deliver solutions on a timely basis.
- We take the "guess-work" out of repairs for electrical automation and control systems with factory trained and authorized personnel.
- Guaranteed availability – if we have an agreement to support your farm during commissioning we work with you to develop an inventory program that meets your needs.
- We are a factory authorized repair and warranty center for leading manufacturers with over four million dollars of hydraulic, automation and control inventory.
- Our organization has a strong and seasoned engineering department that is available to help solve the toughest problems.
